HMP2 Stool Metaproteomics — KEGG Orthologs (KOS)
Significant Features Up & Down (IBD vs nonIBD)

Diagnosis

- K10439: ribose transport system substrate−b
- K04564: superoxide dismutase, Fe−Mn family
- K02110: F−type H+−transporting ATPase subun
- K01785: aldose 1−epimerase [EC:5.1.3.3]
- K00831: phosphoserine aminotransferase [EC:
- K01818: L−fucose/D−arabinose isomerase [EC:
- K01812: glucuronate isomerase [EC:5.3.1.12]
- K01805: xylose isomerase [EC:5.3.1.5]
- K01803: triosephosphate isomerase (TIM) [EC
- K00794: 6,7−dimethyl−8−ribityllumazine synt
- K00248: butyryl−CoA dehydrogenase [EC:1.3.8
- K00626: acetyl−CoA C−acetyltransferase [EC:
- K01006: pyruvate, orthophosphate dikinase [
- K00074: 3−hydroxybutyryl−CoA dehydrogenase
- K00639: glycine C−acetyltransferase [EC:2.3
- K01938: formate−−tetrahydrofolate ligase [E
- K00198: carbon−monoxide dehydrogenase catal
- K01734: methylglyoxal synthase [EC:4.2.3.3]
- K01681: aconitate hydratase [EC:4.2.1.3]
- K00048: lactaldehyde reductase [EC:1.1.1.77
- K00053: ketol−acid reductoisomerase [EC:1.1
- K01687: dihydroxy−acid dehydratase [EC:4.2.
- K01955: carbamoyl−phosphate synthase large
- K03569: rod shape−determining protein MreB
- K01886: glutaminyl−tRNA synthetase [EC:6.1.
- K01887: arginyl−tRNA synthetase [EC:6.1.1.1
- K02803: PTS system, N−acetylglucosamine−spe
- K02804: PTS system, N−acetylglucosamine−spe
- K00927: phosphoglycerate kinase [EC:2.7.2.3
- K03521: electron transfer flavoprotein beta
- K03737: pyruvate−ferredoxin/flavodoxin oxid
- K10112: multiple sugar transport system ATP
- K01571: oxaloacetate decarboxylase, alpha s
- K01625: 2−dehydro−3−deoxyphosphogluconate a
- K01784: UDP−glucose 4−epimerase [EC:5.1.3.2
- K03040: DNA−directed RNA polymerase subunit
- K02988: small subunit ribosomal protein S5
- K02992: small subunit ribosomal protein S7
- K01733: threonine synthase [EC:4.2.3.1]
- K00688: starch phosphorylase [EC:2.4.1.1]
- K01710: dTDP−glucose 4,6−dehydratase [EC:4.
- K01869: leucyl−tRNA synthetase [EC:6.1.1.4]
- K00133: aspartate−semialdehyde dehydrogenas
- K01940: argininosuccinate synthase [EC:6.3.
- K02647: carbohydrate diacid regulator
- K00602: phosphoribosylaminoimidazolecarboxa
- K01915: glutamine synthetase [EC:6.3.1.2]
- K02111: F−type H+−transporting ATPase subun
- K00850: 6−phosphofructokinase 1 [EC:2.7.1.1
- K02564: glucosamine−6−phosphate deaminase [
- K02112: F−type H+−transporting ATPase subun
- K00962: polyribonucleotide nucleotidyltrans
- K12257: SecD/SecF fusion protein
- K01873: valyl−tRNA synthetase [EC:6.1.1.9]
- K01756: adenylosuccinate lyase [EC:4.3.2.2]
- K02933: large subunit ribosomal protein L6
- K01883: cysteinyl−tRNA synthetase [EC:6.1.1
- K00052: 3−isopropylmalate dehydrogenase [EC
- K01945: phosphoribosylamine−−glycine ligase
- K00656: formate C−acetyltransferase [EC:2.3
- K04072: acetaldehyde dehydrogenase / alcoho
- K00266: glutamate synthase (NADPH/NADH) sma
- K02600: N utilization substance protein A
- K15870: NAD(H)−dependent 7alpha−hydroxy−3−o
- K01596: phosphoenolpyruvate carboxykinase (
- K00702: cellobiose phosphorylase [EC:2.4.1.
- K01738: cysteine synthase A [EC:2.5.1.47]
- K00821: acetylornithine/N−succinyldiaminopi
- K02356: elongation factor EF−P
- K11189: phosphocarrier protein
- K01933: phosphoribosylformylglycinamidine c
- K00088: IMP dehydrogenase [EC:1.1.1.205]
- K03615: electron transport complex protein
- K00973: glucose−1−phosphate thymidylyltrans
- K00703: starch synthase [EC:2.4.1.21]
- K01715: enoyl−CoA hydratase [EC:4.2.1.17]
- K03522: electron transfer flavoprotein alph
- K00948: ribose−phosphate pyrophosphokinase
- K10542: methyl−galactoside transport system
- K00040: fructuronate reductase [EC:1.1.1.57
- K00975: glucose−1−phosphate adenylyltransfe
